An agile organization can react and adapt quickly, renew itself, and succeed in a rapidly changing environment without losing sight of the customer.

Follow these tips to build an agile product development framework.

information, people, and processes in a single source of truth

Drive frequent, real-time collaboration between cross-functional teams

2

Include downstream team members and external partners in early design for manufacturability (DFM) reviews

Conduct rapid design iterations

4

Plan engineering and design tasks for each iteration

Leverage external resources for design and manufacturing expertise

6

Develop a sourcing strategy to avoid part shortages and other supply chain shocks

See how Arena can help you drive more agile processes and innovate faster.
