

Embracing a Modern Approach to Product Development

OLD

Traditional Product Development Practices Create Inefficiencies

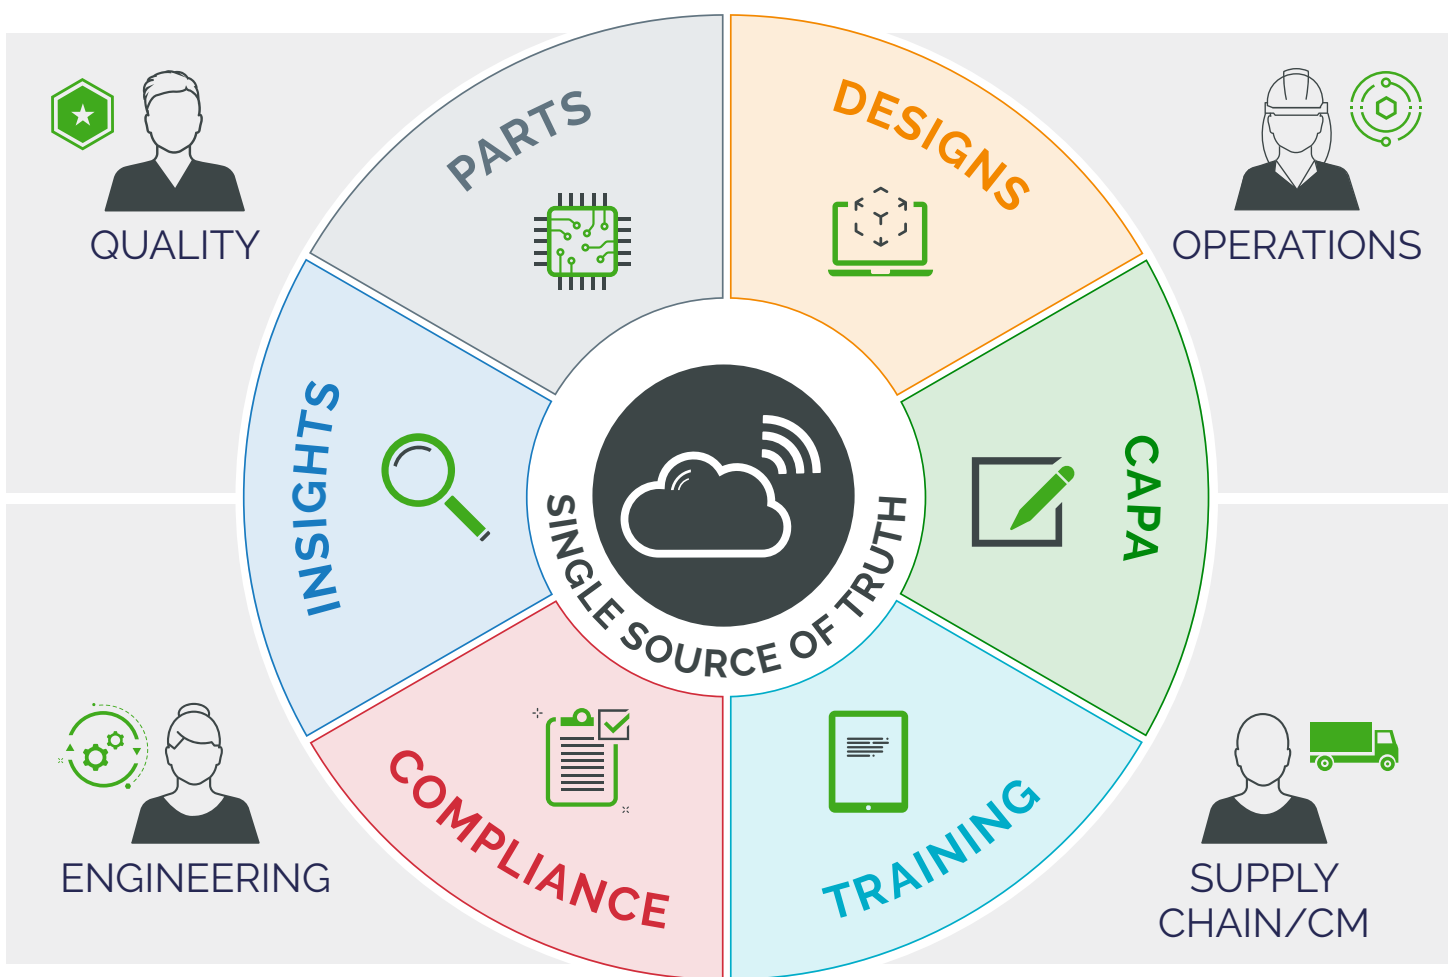

Spreadsheets, paper, and other disconnected systems create information silos and communication gaps:

- Lack of visibility
- Design for manufacturability (DFM) issues
- Product noncompliance
- Manual, time-consuming tasks
- Delayed product launches

NEW

A Modern Approach Speeds Development and Gets Products to Market Faster

Cloud-native PLM and QMS solutions aggregate product information and people in a single system to drive efficient, agile, and connected processes:

- Enables real-time collaboration between internal teams and external partners
- Facilitates rapid design iterations
- Allows earlier DFM reviews to enhance product quality and reduce costs
- Links quality processes to the product record for greater traceability and streamlined compliance
- Automates product development and quality processes and eliminates manual errors

See how Arena PLM and QMS can help you drive faster innovation
